### 8.4 Ratio and Root Tests

The $n^{\text {th }}$-Term Test of Theorem 63 states that in order for a series $\sum_{n=1}^{\infty} a_{n}$ to converge, $\lim _{n \rightarrow \infty} a_{n}=0$. That is, the terms of $\left\{a_{n}\right\}$ must get very small. Not only must the terms approach 0 , they must approach 0 "fast enough": while $\lim _{n \rightarrow \infty} 1 / n=0$, the Harmonic Series $\sum_{n=1}^{\infty} \frac{1}{n}$ diverges as the terms of $\{1 / n\}$ do not approach 0 "fast enough."

The comparison tests of the previous section determine convergence by comparing terms of a series to terms of another series whose convergence is known. This section introduces the Ratio and Root Tests, which determine convergence by analyzing the terms of a series to see if they approach 0 "fast enough."

## Ratio Test

## Theorem 68 Ratio Test

Let $\left\{a_{n}\right\}$ be a positive sequence where $\lim _{n \rightarrow \infty} \frac{a_{n+1}}{a_{n}}=L$.

1. If $L<1$, then $\sum_{n=1}^{\infty} a_{n}$ converges.
2. If $L>1$ or $L=\infty$, then $\sum_{n=1}^{\infty} a_{n}$ diverges.
3. If $L=1$, the Ratio Test is inconclusive.

The principle of the Ratio Test is this: if $\lim _{n \rightarrow \infty} \frac{a_{n+1}}{a_{n}}=L<1$, then for large $n$, each term of $\left\{a_{n}\right\}$ is significantly smaller than its previous term which is enough to ensure convergence.

## Example 248 Applying the Ratio Test

Use the Ratio Test to determine the convergence of the following series:

1. $\sum_{n=1}^{\infty} \frac{2^{n}}{n!}$
2. $\sum_{n=1}^{\infty} \frac{3^{n}}{n^{3}}$
3. $\sum_{n=1}^{\infty} \frac{1}{n^{2}+1}$.

## Notes:

Note: Theorem 64 allows us to apply the Ratio Test to series where $\left\{a_{n}\right\}$ is positive for all but a finite number of terms.

## SOLUTION

1. $\sum_{n=1}^{\infty} \frac{2^{n}}{n!}$ :

$$
\begin{aligned}
\lim _{n \rightarrow \infty} \frac{2^{n+1} /(n+1)!}{2^{n} / n!} & =\lim _{n \rightarrow \infty} \frac{2^{n+1} n!}{2^{n}(n+1)!} \\
& =\lim _{n \rightarrow \infty} \frac{2}{n+1} \\
& =0
\end{aligned}
$$

Since the limit is $0<1$, by the Ratio Test $\sum_{n=1}^{\infty} \frac{2^{n}}{n!}$ converges.
2. $\sum_{n=1}^{\infty} \frac{3^{n}}{n^{3}}$ :

$$
\begin{aligned}
\lim _{n \rightarrow \infty} \frac{3^{n+1} /(n+1)^{3}}{3^{n} / n^{3}} & =\lim _{n \rightarrow \infty} \frac{3^{n+1} n^{3}}{3^{n}(n+1)^{3}} \\
& =\lim _{n \rightarrow \infty} \frac{3 n^{3}}{(n+1)^{3}} \\
& =3 .
\end{aligned}
$$

Since the limit is $3>1$, by the Ratio Test $\sum_{n=1}^{\infty} \frac{3^{n}}{n^{3}}$ diverges.
3. $\sum_{n=1}^{\infty} \frac{1}{n^{2}+1}$ :

$$
\begin{aligned}
\lim _{n \rightarrow \infty} \frac{1 /\left((n+1)^{2}+1\right)}{1 /\left(n^{2}+1\right)} & =\lim _{n \rightarrow \infty} \frac{n^{2}+1}{(n+1)^{2}+1} \\
& =1
\end{aligned}
$$

Since the limit is 1 , the Ratio Test is inconclusive. We can easily show this series converges using the Direct or Limit Comparison Tests, with each comparing to the series $\sum_{n=1}^{\infty} \frac{1}{n^{2}}$.

## Notes:

The Ratio Test is not effective when the terms of a series only contain algebraic functions (e.g., polynomials). It is most effective when the terms contain some factorials or exponentials. The previous example also reinforces our developing intuition: factorials dominate exponentials, which dominate algebraic functions, which dominate logarithmic functions. In Part 1 of the example, the factorial in the denominator dominated the exponential in the numerator, causing the series to converge. In Part 2, the exponential in the numerator dominated the algebraic function in the denominator, causing the series to diverge.

While we have used factorials in previous sections, we have not explored them closely and one is likely to not yet have a strong intuitive sense for how they behave. The following example gives more practice with factorials.

## Example 249 Applying the Ratio Test

Determine the convergence of $\sum_{n=1}^{\infty} \frac{n!n!}{(2 n)!}$.

Solution Before we begin, be sure to note the difference between $(2 n)!$ and $2 n!$. When $n=4$, the former is $8!=8 \cdot 7 \cdot \ldots \cdot 2 \cdot 1=40,320$, whereas the latter is $2(4 \cdot 3 \cdot 2 \cdot 1)=48$.

Applying the Ratio Test:

$$
\lim _{n \rightarrow \infty} \frac{(n+1)!(n+1)!/(2(n+1))!}{n!n!/(2 n)!}=\lim _{n \rightarrow \infty} \frac{(n+1)!(n+1)!(2 n)!}{n!n!(2 n+2)!}
$$

Noting that $(2 n+2)!=(2 n+2) \cdot(2 n+1) \cdot(2 n)!$, we have

$$
\begin{aligned}
& =\lim _{n \rightarrow \infty} \frac{(n+1)(n+1)}{(2 n+2)(2 n+1)} \\
& =1 / 4
\end{aligned}
$$

Since the limit is $1 / 4<1$, by the Ratio Test we conclude $\sum_{n=1}^{\infty} \frac{n!n!}{(2 n)!}$ converges.

## Root Test

The final test we introduce is the Root Test, which works particularly well on series where each term is raised to a power, and does not work well with terms containing factorials.

## Notes:

Note: Theorem 64 allows us to apply the Root Test to series where $\left\{a_{n}\right\}$ is positive for all but a finite number of terms.

## Theorem 69 Root Test

Let $\left\{a_{n}\right\}$ be a positive sequence, and let $\lim _{n \rightarrow \infty}\left(a_{n}\right)^{1 / n}=L$.

1. If $L<1$, then $\sum_{n=1}^{\infty} a_{n}$ converges.
2. If $L>1$ or $L=\infty$, then $\sum_{n=1}^{\infty} a_{n}$ diverges.
3. If $L=1$, the Root Test is inconclusive.

## Example $250 \quad$ Applying the Root Test

Determine the convergence of the following series using the Root Test:

1. $\sum_{n=1}^{\infty}\left(\frac{3 n+1}{5 n-2}\right)^{n}$
2. $\sum_{n=1}^{\infty} \frac{n^{4}}{(\ln n)^{n}}$
3. $\sum_{n=1}^{\infty} \frac{2^{n}}{n^{2}}$.

## Solution

1. $\lim _{n \rightarrow \infty}\left(\left(\frac{3 n+1}{5 n-2}\right)^{n}\right)^{1 / n}=\lim _{n \rightarrow \infty} \frac{3 n+1}{5 n-2}=\frac{3}{5}$.

Since the limit is less than 1 , we conclude the series converges. Note: it is difficult to apply the Ratio Test to this series.
2. $\lim _{n \rightarrow \infty}\left(\frac{n^{4}}{(\ln n)^{n}}\right)^{1 / n}=\lim _{n \rightarrow \infty} \frac{\left(n^{1 / n}\right)^{4}}{\ln n}$.

As $n$ grows, the numerator approaches 1 (apply L'Hôpital's Rule) and the denominator grows to infinity. Thus

$$
\lim _{n \rightarrow \infty} \frac{\left(n^{1 / n}\right)^{4}}{\ln n}=0
$$

Since the limit is less than 1, we conclude the series converges.
3. $\lim _{n \rightarrow \infty}\left(\frac{2^{n}}{n^{2}}\right)^{1 / n}=\lim _{n \rightarrow \infty} \frac{2}{\left(n^{1 / n}\right)^{2}}=2$.

Since this is greater than 2 , we conclude the series diverges.

## Notes:

## Exercises 8.4

## Terms and Concepts

1. The Ratio Test is not effective when the terms of a sequence only contain $\qquad$ functions.
2. The Ratio Test is most effective when the terms of a sequence contains $\qquad$ and/or $\qquad$ functions.
3. What three convergence tests do not work well with terms containing factorials?
4. The Root Test works particularly well on series where each term is $\qquad$ to a $\qquad$ -

## Problems

In Exercises 5-14, determine the convergence of the given series using the Ratio Test. If the Ratio Test is inconclusive, state so and determine convergence with another test.
5. $\sum_{n=0}^{\infty} \frac{2 n}{n!}$
6. $\sum_{n=0}^{\infty} \frac{5^{n}-3 n}{4^{n}}$
7. $\sum_{n=0}^{\infty} \frac{n!10^{n}}{(2 n)!}$
8. $\sum_{n=1}^{\infty} \frac{5^{n}+n^{4}}{7^{n}+n^{2}}$
9. $\sum_{n=1}^{\infty} \frac{1}{n}$
10. $\sum_{n=1}^{\infty} \frac{1}{3 n^{3}+7}$
11. $\sum_{n=1}^{\infty} \frac{10 \cdot 5^{n}}{7^{n}-3}$
12. $\sum_{n=1}^{\infty} n \cdot\left(\frac{3}{5}\right)^{n}$
13. $\sum_{n=1}^{\infty} \frac{2 \cdot 4 \cdot 6 \cdot 8 \cdots 2 n}{3 \cdot 6 \cdot 9 \cdot 12 \cdots 3 n}$
14. $\sum_{n=1}^{\infty} \frac{n!}{5 \cdot 10 \cdot 15 \cdots(5 n)}$

In Exercises 15-24, determine the convergence of the given series using the Root Test. If the Root Test is inconclusive, state so and determine convergence with another test.
15. $\sum_{n=1}^{\infty}\left(\frac{2 n+5}{3 n+11}\right)^{n}$
16. $\sum_{n=1}^{\infty}\left(\frac{.9 n^{2}-n-3}{n^{2}+n+3}\right)^{n}$
17. $\sum_{n=1}^{\infty} \frac{2^{n} n^{2}}{3^{n}}$
18. $\sum_{n=1}^{\infty} \frac{1}{n^{n}}$
19. $\sum_{n=1}^{\infty} \frac{3^{n}}{n^{2} 2^{n+1}}$
20. $\sum_{n=1}^{\infty} \frac{4^{n+7}}{7^{n}}$
21. $\sum_{n=1}^{\infty}\left(\frac{n^{2}-n}{n^{2}+n}\right)^{n}$
22. $\sum_{n=1}^{\infty}\left(\frac{1}{n}-\frac{1}{n^{2}}\right)^{n}$
23. $\sum_{n=1}^{\infty} \frac{1}{(\ln n)^{n}}$
24. $\sum_{n=1}^{\infty} \frac{n^{2}}{(\ln n)^{n}}$

In Exercises 25 - 34, determine the convergence of the given series. State the test used; more than one test may be appropriate.
25. $\sum_{n=1}^{\infty} \frac{n^{2}+4 n-2}{n^{3}+4 n^{2}-3 n+7}$
26. $\sum_{n=1}^{\infty} \frac{n^{4} 4^{n}}{n!}$
27. $\sum_{n=1}^{\infty} \frac{n^{2}}{3^{n}+n}$
28. $\sum_{n=1}^{\infty} \frac{3^{n}}{n^{n}}$
29. $\sum_{n=1}^{\infty} \frac{n}{\sqrt{n^{2}+4 n+1}}$
30. $\sum_{n=1}^{\infty} \frac{n!n!n!}{(3 n)!}$
31. $\sum_{n=1}^{\infty} \frac{1}{\ln n}$
32. $\sum_{n=1}^{\infty}\left(\frac{n+2}{n+1}\right)^{n}$
33. $\sum_{n=1}^{\infty} \frac{n^{3}}{(\ln n)^{n}}$
34. $\sum_{n=1}^{\infty}\left(\frac{1}{n}-\frac{1}{n+2}\right)$

## Solutions to Odd Exercises

29. Diverges; compare to $\sum_{n=1}^{\infty} \frac{1}{n}$. Just as $\lim _{n \rightarrow 0} \frac{\sin n}{n}=1$, $\lim _{n \rightarrow \infty} \frac{\sin (1 / n)}{1 / n}=1$.
30. Converges; compare to $\sum_{n=1}^{\infty} \frac{1}{n^{3 / 2}}$.
31. Converges; Integral Test
32. Diverges; the $n^{\text {th }}$ Term Test and Direct Comparison Test can be used.
33. Converges; the Direct Comparison Test can be used with sequence $1 / 3^{n}$.
34. Diverges; the $n^{\text {th }}$ Term Test can be used, along with the Integral Test.
35. (a) Converges; use Direct Comparison Test as $\frac{a_{n}}{n}<n$.
(b) Converges; since original series converges, we know $\lim _{n \rightarrow \infty} a_{n}=0$. Thus for large $n, a_{n} a_{n+1}<a_{n}$.
(c) Converges; similar logic to part (b) so $\left(a_{n}\right)^{2}<a_{n}$.
(d) May converge; certainly $n a_{n}>a_{n}$ but that does not mean it does not converge.
(e) Does not converge, using logic from (b) and $n^{\text {th }}$ Term Test.

## Section 8.4

1. algebraic, or polynomial.
2. Integral Test, Limit Comparison Test, and Root Test
3. Converges
4. Converges
5. The Ratio Test is inconclusive; the $p$-Series Test states it diverges.
6. Converges
7. Converges; note the summation can be rewritten as $\sum_{n=1}^{\infty} \frac{2^{n} n!}{3^{n} n!}$, from which the Ratio Test can be applied.
8. Converges
9. Converges
10. Diverges
11. Diverges. The Root Test is inconclusive, but the $n^{\text {th }}$-Term Test shows divergence. (The terms of the sequence approach $e^{2}$, not 0 , as $n \rightarrow \infty$.)
12. Converges
13. Diverges; Limit Comparison Test
14. Converges; Ratio Test or Limit Comparison Test with $1 / 3^{n}$.
15. Diverges; $n^{\text {th }}$-Term Test or Limit Comparison Test with 1.
16. Diverges; Direct Comparison Test with $1 / n$
17. Converges; Root Test

## Section 8.5

1. The signs of the terms do not alternate; in the given series, some terms are negative and the others positive, but they do not necessarily alternate.
2. Many examples exist; one common example is $a_{n}=(-1)^{n} / n$.
3. (a) converges
(b) converges ( $p$-Series)
(c) absolute
4. (a) diverges (limit of terms is not 0 )
(b) diverges
(c) $\mathrm{n} / \mathrm{a}$; diverges
5. (a) converges
(b) diverges (Limit Comparison Test with $1 / n$ )
(c) conditional
6. (a) diverges (limit of terms is not 0 )
(b) diverges
(c) $\mathrm{n} / \mathrm{a}$; diverges
7. (a) diverges (terms oscillate between $\pm 1$ )
(b) diverges
(c) $\mathrm{n} / \mathrm{a}$; diverges
8. (a) converges
(b) converges (Geometric Series with $r=2 / 3$ )
(c) absolute
9. (a) converges
(b) converges (Ratio Test)
(c) absolute
10. (a) converges
(b) diverges ( $p$-Series Test with $p=1 / 2$ )
(c) conditional
11. $S_{5}=-1.1906 ; S_{6}=-0.6767$;
$-1.1906 \leq \sum_{n=1}^{\infty} \frac{(-1)^{n}}{\ln (n+1)} \leq-0.6767$
12. $S_{6}=0.3681 ; S_{7}=0.3679$;
$0.3681 \leq \sum_{n=0}^{\infty} \frac{(-1)^{n}}{n!} \leq 0.3679$
13. $n=5$
14. Using the theorem, we find $n=499$ guarantees the sum is within 0.001 of $\pi / 4$. (Convergence is actually faster, as the sum is within $\varepsilon$ of $\pi / 24$ when $n \geq 249$.)

## Section 8.6

1. 1
2. 5
3. $1+2 x+4 x^{2}+8 x^{3}+16 x^{4}$
4. $1+x+\frac{x^{2}}{2}+\frac{x^{3}}{6}+\frac{x^{4}}{24}$
